Notes:

A large, empty graph grid consisting of a 20x20 grid of squares. Each square is further divided into a 5x5 grid of smaller squares, creating a total of 100x100 small squares. The grid is light gray and occupies the majority of the page below the 'Notes:' header.

## Materials:

POM = Polyoxymethylene - Delrin®

Deviating from the standard design, other materials and quality classes are available on request.

## Surface finishes:

Other surface finishes are available at additional cost, e.g. matte-finished or high-polish chromium-plated steel parts.

Other colors are also available on request for plastic coatings or molded plastic parts.

## Threads:

Threads are manufactured to ISO DIN 13 medium tolerance class, i.e. 6H for nut threads and 6g for bolt threads. External threads up to 60 mm are generally supplied fully threaded. Screw lengths of 70 mm and more are supplied with 60 mm long threads.

## Threads of aluminum grips:

Especially threads of aluminum grips cannot be true to gauge size due to final surface finish refinement and the removal of material during related pretreatment.

The majority of these threads are moulded in order to strengthen the material. As a result, the tearing resistance of aluminum for a thread with M5x10 is higher than 2000 N.

## Special versions:

KIPP Clamp and Tension Levers can also be supplied on request with predrilled inserts, locating holes, locating bolts for pinning and other thread ends to DIN 78 (except for flat point) and to DIN 6332.

As a basic rule, you can rely on us as a competent partner for your daily clamping needs. We are always happy to advise you.
