NACHI AMERICA INC.

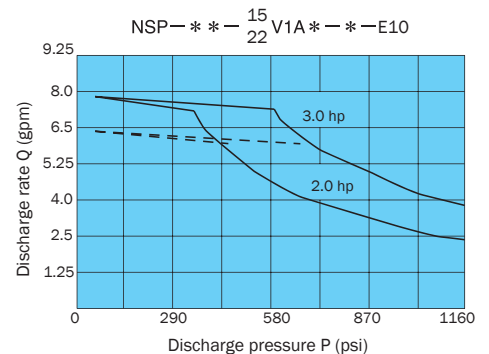

NSP 2.0 HYDRAULIC POWER UNIT

- Variable vane uni-pump allows for compact design
- Simple structure and excellent reliability ensures easy handling and maintenance

NSP Motor Selection Curve

UVN Uni-Pump

- New Dual Voltage cast iron motor provides a durable platform for diverse applications
- Nema premium efficiency motor
- High operating efficiency for lower power consumption and reduced heat generation

Nachi Design

- Reduced heat generation supports high precision applications
- 40% energy savings when compared to standard Nachi power units
- Minimal oil requirements reduces maintenance costs

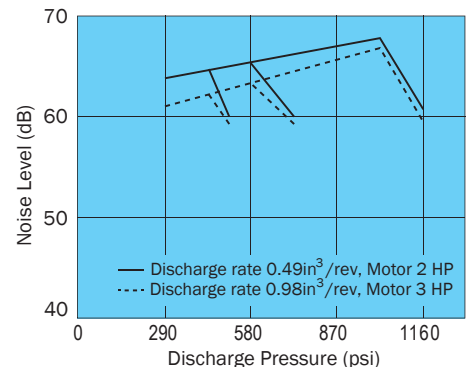

APPLICATIONS

- CNC Machine
- Mill
- Lathe
- Hydraulic Press
- Injection Molding Machine

Selection Precautions

- Circuit Configuration
The basic configuration is a standard NSP-** plus an external manifold (circuit).
Provide piping with sufficient flexibility between the unit and external manifold.
Make sure the maximum peak pressure (setting pressure + surge pressure) during operation does not exceed 14MPa.
The following are typical pipe conditions at a reference maximum peak pressure at 14MPa or less as reference.

Rubber hose (for 14MPa) 1/2" x 2m (Pipe Capacity: 250cm³) pump operating conditions: 1MPa→7MPa, full cutoff
At pressures in excess of 14MPa, equip a circuit side surge cutoff relief valve.

- Built-in Manifold Block
When a manifold block (optional) is built into the pump, make sure the block and valve total weight is not greater than 15kg.

Block Type	F1	F2	F3
Block Weight (kg)	4.5	6.5	8.5
Allowable Additional Weight (kg)	10.5	8.5	6.5

- Paint Specifications
The interior and exterior of the tank and the motor are coated with a melamine baked-on resin coating, the motor is coated with a cation electrode-position coating, while the pump is spray painted with a lacquer finish. Color is Nachi standard color (Munsell No. N-1 70% gloss).
